The full setup guide: RankSite + Claude, in 5 minutes

Build, rank and run local business websites from Claude, with the 7 free Local Client Finder skills and RankSite. No code, no WordPress, no hosting to set up. RankSite is our own tool; your first site is free. Results vary.

1. Connect RankSite to Claude (1 minute)

1. Open Claude (claude.ai or the desktop app) and go to **Settings › Connectors**.
2. Click **Add custom connector** and paste: `https://app.ranksite.ai/mcp`
3. Sign in to RankSite when asked (free account; your first site is free).

2. Install the 7 free skills (2 minutes)

Claude Code: run these two commands: `claude plugin marketplace add WordRocket/local-client-finder` `claude plugin install local-client-finder@local-client-finder`

Claude.ai / desktop: download the skill zips from github.com/WordRocket/local-client-finder (the dist folder), then **Customize › Skills › + › Upload a skill** for each one. Turn on **Code execution and file creation** in Settings › Capabilities. For best results, add Claude in Chrome so Claude can read Google Maps the way you see it.

3. What each skill does, and what to ask

1. **website-maxing** (the whole playbook).
   ```
   Claude: "Run the website maxing playbook for roofers in Tulsa"
   ```
2. **find-clients**: businesses on Google Maps with great reviews and no website.
   ```
   Claude: "Find me clients: pressure washing in Tulsa"
   ```
3. **find-broken-sites**: businesses whose website is down, insecure or out of date.
   ```
   Claude: "Find roofers in Hamilton with broken websites"
   ```
4. **find-new-businesses**: businesses that just opened (city licence data).
   ```
   Claude: "Who just opened in Chicago and has no website?"
   ```

5. **build-website**: builds the whole site from a Google profile with RankSite.

   ```
   Claude: "Build a website for this business: [Google Maps link]"
   ```

6. **seo-plan**: a page for every service in every town, readable by Google and ChatGPT.

   ```
   Claude: "Plan the SEO for this site"
   ```

7. **blog-autopilot**: turns on Auto-Grow, so new town pages and blog posts go up every week.

   ```
   Claude: "Put this site on autopilot"
   ```

4. Your first day

1. Run find-clients for one trade in your town. Pick the lead with the most reviews and no website.
2. Build their site as a preview (never publish without the owner's yes).
3. Call them with the preview link: "I built you a website, want to see it?"
4. Charge for the site, then monthly for hosting and SEO. You set your prices.

Next: read "50 ways to land website clients, ranked S tier to C tier" (in this folder).

Free skills: github.com/WordRocket/local-client-finder · RankSite: app.ranksite.ai. Follow anti-spam laws (CAN-SPAM, CASL) when you reach out. Never publish a business's site or send a message without their yes. Results vary.
